

COMAND®

WHAT IS COMAND?

COMAND is compost made from 75% green waste (yard, food, and animal) and 25% brown waste (pine mulch).

THE PROCESS

1. Waste products are inoculated with the proprietary blend of microbes
2. Magic happens with the Modified Static Aerobic Pile (MSAP®) method and enhanced curing and reinoculation techniques.
3. Products are screened to various grades
4. Monthly testing checks factors such as pH and nutrient content

THE BENEFITS

- Improves soil structure and porosity for a better root environment
- Increased root density and length
- Increases moisture infiltration and permeability
- Improved water holding leading to greater drought resistance
- Buffers soil pH
- More even turf density and color, green-up without excessive top growth
- Supplies beneficial microorganisms

SUSTAINABLE

- Pet and people safe
- Processed in Orlando with locally sourced organic material
- Peat-free
- Decreases water needs in landscapes and increases drought resistance of plants.
- Slow-release nutrients that can completely replace fertilizers

COMANDturf

100% COMAND compost that can be used as a soil conditioner or as a top dressing to reduce or eliminate fertilizer use.

3 weeks after applying Lawn and Turf. Professional application available. Request a free quote at WilcoxNursery.com. Excellent for groundcover and new landscape bed establishment or fertilizer alternative in established beds.

COMANDscape

Creeping Sage 6 months after new landscape installation.

A blend of COMAND compost and pine bark. A planting soil that can be in planters, raised beds, or as an in-ground amendment.
